

You know one is a leading contributor to **global warming.**

Did you know the other one is, too?

According to the Food and Agriculture Organization of the United Nations, the animal agriculture sector is one of the leading contributors to climate change, emitting approximately 18 percent of global, human-induced greenhouse gases. Reducing the amount of meat, eggs, and dairy products in your diet is one of the most effective ways to reduce your contribution to climate change. Find out more about farm animal welfare, factory farming's environmental impacts, and what you can do to help.
